OpenClaw Security

Drop-in security module for OpenClaw AI agents.

Installation

```
pip install openclaw-security
```

Usage

```
from openclaw_security import SecurityAgent

security = SecurityAgent()

security.validate_input(agent_name, user_input)
security.validate_tool_call(agent_name, tool_name)
response = security.sanitize_output(agent_name, response)
```

Modes

monitor - logs only
enforce - blocks violations

🚀 How To Build & Install Locally

Inside project root:

```
pip install build
python -m build
pip install dist/openclaw_security-0.1.0-py3-none-any.whl
```

Or editable mode:

```
pip install openclaw-security
```

Then:

```
from openclaw_security import SecurityAgent
security = SecurityAgent()
```

That’s it.

Zero friction.

```
pip install openclaw-security
openclaw-sec scan .
```
